(a) escape of completely mixed light
planar
scattering layer
hemispherical MLA
freeform MLA
random MLA
wavy surface
p_mix = p (memoryless)
p_mix = p − σ²/(1 − p)
escape probability p (uniform radiance)

(b) what mixing can gain (AI, 550 nm)
complete reciprocal mixing
memoryless formula
planar (off-scale):
mixing +10 pp, memoryless +41 pp
predicted gain over actual n_sta (pp)
